

# Instructions for use:

## Step 1

Wipe board of all heavy contaminants. With a damp cloth, apply Wood Cleaner to the surface of the wood and rub using a circular motion. Wipe cleaner from wood with a clean wet cloth or rinse with water. Reapply if necessary.

## Step 2

Apply a generous amount of Hydrating Oil to your wood item. Allow oil to penetrate deep into the wood for 30 minutes or overnight. If you see dry spots where the oil has been absorbed, apply more Hydrating Oil to the area. After the oil has had ample time to absorb, wipe away remaining oil from the item with a clean cloth.

## Step 3

Ensure board is clean and completely dry. With a clean cloth, apply a generous amount of Wood Butter to all surfaces of the wood. Allow Wood Butter to soak into the wood a minimum of 30 minutes or overnight. Wipe remaining Wood Butter with a clean cloth. Reapply if necessary.

## Step 4

Repeat the process or use an individual product as necessary. Wood Butter is also great for dry leather!
